

CHECKLIST
OF DATED
PRECANCELS
KNOWN TO
BE USED IN
JULY 1938

Jim Hirstein
September 2020

INTRODUCTION

In July 1938, the dating order of the Third Assistant Postmaster General took effect, requiring all precanceled stamps on packages with more than 6c postage to include the initials of the user and the month and year of use. Since then, dated precancels have been a popular specialty for precancel collectors. There have been checklists, journal articles, study groups, catalogs, and databases that picture more than 10,000 controls.

The controls were applied in three ways. Precancels with the city and state already on the stamp would have the control added by some type of printing process (printed dated) or by a handstamp device (handstamp dateds). In some cases, the city, state, user, and date were all applied in the same printing operation (these are called integral precancels). Some of the early users did not have any kind of printing device, so they just used a pen to write the initials and the date. These are referred to as manuscript controls, and are noted in the list by (mms).

This is the third printing to show all known control initials that were used in that first month, by any means. By far, most of the controls were applied by handstamps. Any printed dated controls are noted in the list by (PD). Integral precancels are noted by (int). In a few cases, the same initials appear on more than one device in the same month. There are brief descriptive notes that distinguish these devices. The note 'SNIF' means 'state name in full' – it compares that device with one where the state name is abbreviated. Some devices are clearly July '38 but the user is hard to read, so a (?) indicates that this is my best guess at the users initials.

This list has over 1200 entries, but I expect there are more. Some have probably been missed, and some have not been found yet. Some of these are very common and others are known on only one copy. I continue to look for July '38 and will add to the list whenever I can, but this is now a pretty good start.

As always, thanks go to the early collectors, checklist compilers, and catalog writers who saved and documented so much of the valuable information that we can draw upon today. Many of these collectors are unknown to me, but their efforts have contributed to this hobby, and I express my heartfelt appreciation to all of them.

I will mention a few names from the long line of contributors to the dated cause. The original was certainly Rolston Lyon, who compiled the first checklist of all dateds in 1940. His list was updated by Dr. Jon Wilson in the 1980s, and extended by my good friend Earl Ratzer. The study and information I gained from these pioneers is priceless. I learned much of what I know about printed dateds and integrals from Dale Besom, catalog editor when I found dateds in the 1980s. The extension of the PSS PD catalog and the Handstamp Dated Database, both by Gene Byers, have been most helpful. Integrals are illustrated in the PSS Town and Type Catalog, now in its eighth edition. Manley Behrens and Bob Bartlow started me down the path of dateds around 1980, and it has led to an exciting and challenging journey. I hope this checklist will inspire future collectors to keep looking for the new frontiers that are still there to be found in dated precancels.
